

WETU HUB SOLAR WATER PURIFICATION CENTRE, HOMABAY

About us

WeTu owns and operates seven solar powered hubs that are located close to Lake Victoria. The Hubs offer products and services for solar lighting and charging, safe drinking water and e-mobility. WeTu is powered by WE!Hub Victoria Ltd, a company that was founded in January 2019, based in Kisumu, Kenya. WE!Hub Victoria is owned by Siemens Stiftung. WeTu is a social enterprise that aims to enhance the quality of life for individuals and communities and protect the local eco-system.

Available technologies

1. E-Mobility

Our goal is to provide quality products and offer business models that enable our customers with fast and easy access to electric vehicles, which can compete and improve on existing means of transport. To establish new value chains of the transport means, our WeMobility division sets up workshops in which the assembly and service of electric bicycles and motorcycles takes place. Training and instructions on how to build and maintain the e-mobility solutions and obtain adequate material are taking place at selected WeTu Hubs. This way mechanics are prepared for the changing requirements that the upcoming e-mobility solutions require.

WeTu Battery powered transporter truck

2. WeTu Power

WeTu Hubs are solar driven charging stations, providing electricity for a range of services. WeTu Hubs offer access to clean, reliable and safe energy solutions, such as fishing lanterns and e-driven vehicles. As a social enterprise using a sharing economy approach to provide our services to customers. By renting our lanterns and batteries, WeTu takes care of the charging and maintenance of the products to ensure quality and an environmentally sound reuse and recycling process.

3. WeTu Water hubs

WeTu hubs sell safe, clean, filtered drinking water. The water is available for purchase every day of the year, and at any time of day through a water ATM system accepting purchased tokens, cash or M-PESA. The hubs use simple yet innovative and quality focused filtration technologies to provide safe drinking water. The Technology is powered by solar energy.

4. WeTu Collect

WeTu is establishing a collection and recycling value chain in the Lake Victoria region in Kenya. Electric and electronic devices that are out of use shall be seen as a valuable resource with potential to be repaired or recycled in an environmentally sound manner. WeTu has completed the setup of five WeCollect centers in the following locations: Mbita, Sindo, Ragwe (Homabay County), Sori (Migori County) and Honge (Siaya County).
